Participants Needed!

Post-stroke Fatigue and Sense of Agency

In this study, we want to see how fatigue impacts the feeling of control over one’s voluntary action and its consequences, i.e. the “Sense of Agency”.

This study takes place at the Institute of Neurology, 33 Queen Square, London, and involves completing computer-based tasks during an EEG scan.

Email m.bertoli@ucl.ac.uk with your name, email address and contact number to take part.
About the study

Who can take part?

We're looking for volunteers who fit the following criteria:

- Fatigued stroke survivors
- Stroke occurred at least 3 months prior to the study;
- No clinical diagnosis of any other neurological disorder
- Physically well recovered following their stroke
- Not taking anti-depressants or any other medication that has a direct effect on the central nervous system
- Not clinically depressed

What can you expect?

Brain Imaging

A cap (similar to a bathing cap) with a number of electrodes will be placed on your head. This is known as EEG and records brain activity from the surface of the scalp. This is not invasive in any way and has no side effects. During this scan, volunteers will be doing a computer-based task that involves button pressing and listening to tones through headphones.

Reimbursement

Travel costs to and from 33 Queen Square can be reimbursed (receipts needed).

Contact m.bertoli@ucl.ac.uk with your name, email address and contact number to take part.
